**(54) NOVEL PYRIMIDINE DERIVATIVE AND MEDICINAL COMPOSITION.**

(57) A pyrimidine derivative represented by general formula (I) or a salt thereof, having an angiotensin II antagonism. In said formula, A represents (I-1) or (I-2), R<sup>1</sup> and R<sup>2</sup> represent each independently hydrogen, alkyl, alkenyl, alkynyl, alkoxy, alkylthio, acetyl, halogen, phenyl or substituted phenyl; R<sup>3</sup> represents hydrogen, alkyl, alkenyl, alkynyl or acetyl; X represents O, MH or S(O)p; p represents an integer of 0 to 2; m represents an integer of 1 or 2; B represents carboxy, alkoxy carbonyl, cyano, tetrazolyl or protected tetrazolyl; and n represents an integer of 1 to 2.

EP 0 685 467 A1

## TECHNICAL FIELD

The present invention relates to a novel pyrimidine derivative, and a pharmaceutical composition, more particularly, an angiotensin II antagonist, containing the pyrimidine derivative as an effective ingredient. The above-mentioned novel pyrimidine derivative according to the present invention exhibits an angiotensin II antagonism, and so is useful for various cardiovascular diseases, for example, hypertension, cardiac disease, cerebral infarction, and arteriosclerosis.

## BACKGROUND ART

Renin-angiotensin system is known as a major factor to maintain blood pressure. It is believed that the active renin (i.e., proteinase) secreted from kidney acts characteristically on the renin substrate (angiotensinogen) produced in liver to produce angiotensin I (AI), then, the resulting AI is converted to angiotensin II (All) by the angiotensin converting enzyme (ACE) produced in lung, and the resulting All exhibits a strong activity to raise blood pressure. Therefore, an All antagonist may be used for the treatment of cardiovascular diseases, such as hypertension.

Hitherto, many angiotensin II analogues, such as [Sar<sup>1</sup>, Ala<sup>8</sup>] All (saralasin), was reported to exhibit an angiotensin II antagonism. However, these All antagonists had disadvantages in that the duration to exhibit efficacy is short and no effect is exhibited in oral administration. Further, imidazole derivatives as non-peptide type All antagonists were disclosed in many patent publications; for example, Japanese Unexamined Patent Publications (Kokai) No. 56-71074, No. 57-98270, No. 58-157768, No. 63-23868, and No. 1-287071. Further, pyrimidine derivatives have been disclosed in European Publication No. 0407342, Japanese Unexamined Patent Publications (Kokai) No. 3-133964, No. 3-197466, No. 4-120072, No. 4-230370, No. 4-261156, and No. 4-330073, and European Publication No. 0445811.

## DISCLOSURE OF INVENTION

The inventors of the present invention engaged in intensive research to obtain an agent for the cardiovascular system which exhibits a superior All antagonism, can be administered orally, and is low toxicity, and as a result, found that a group of pyrimidine derivatives having a chemical structure different from that of the conventional pyrimidine derivatives and carrying a substituted phenylalkyl group at 5-position of the pyrimidine ring exhibits a strong antagonism. The present invention is based on this finding.

Accordingly, the present invention relates to a pyrimidine derivative of the general formula (I):

35

40

wherein A is a group of the general formula (I-1):

45

50

wherein R<sup>1</sup> and R<sup>2</sup>, which may be same or different, are a hydrogen or halogen atom, lower alkyl, lower alkenyl, lower alkynyl, lower alkoxy, lower alkylthio, acetyl, phenyl, or substituted phenyl group, R<sup>3</sup> is a hydrogen atom, lower alkyl, lower alkenyl, lower alkynyl, or acetyl group, X is O, NH, or S(O)<sub>p</sub>, p is an integer of 0 to 2, and m is an integer of 1 to 2, or a group of the general formula (I-2):

10

wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, X, p, and m have the same meanings as above, B is a carboxyl, lower alkoxy carbonyl, cyano, tetrazolyl, or protected tetrazolyl group, and n is an integer of 1 to 2, or a salt thereof.

Further, the present invention relates to a pharmaceutical composition, in particular an angiotensin II antagonist, characterized by containing the pyrimidine derivative of the general formula (I) or pharmaceutically acceptable salt thereof as an effective ingredient.

#### BEST MODE FOR CARRYING OUT THE INVENTION

The term "lower alkyl group" used herein means a straight or branched alkyl group with 1 to 6 (in particular 1 to 4) carbon atoms, such as, methyl, ethyl, propyl, isopropyl, n-butyl, isobutyl, sec-butyl, t-butyl, n-pentyl, isopentyl, neopentyl, t-pentyl, 1-methylbutyl, 2-methylbutyl, 1,2-dimethylpropyl, hexyl, isoheptyl, 1-methylpentyl, 2-methylpentyl, 3-methylpentyl, 1,1-dimethylbutyl, 1,2-dimethylbutyl, 1,3-dimethylbutyl, 2,2-dimethylbutyl, 2,3-dimethylbutyl, 3,3-dimethylbutyl, 1-ethylbutyl, 2-ethylbutyl, 1,1,2-trimethylpropyl, 1,2,2-trimethylpropyl, or 1-ethyl-2-methylpropyl group, or the like.

The term "lower alkenyl group" means a straight or branched alkenyl group with 2 to 6 (in particular 2 to 4) carbon atoms, such as, vinyl, allyl, 1-propenyl, isopropenyl, 1-but enyl, 2-but enyl, 3-but enyl, 1-methyl-1-propenyl, 2-methyl-1-propenyl, 1-methylallyl, 2-methylallyl, 1-pentenyl, 2-pentenyl, 3-pentenyl, 4-pentenyl, 1-methyl-1-but enyl, 1-methyl-2-but enyl, 1-methyl-3-but enyl, 2-methyl-1-but enyl, 2-methyl-2-but enyl, 2-methyl-3-but enyl, 3-methyl-1-but enyl, 3-methyl-2-but enyl, 3-methyl-3-but enyl, 1,1-dimethylallyl, 1,2-dimethyl-1-propenyl, 1,2-dimethyl-2-propenyl, 1-ethyl-1-propenyl, 1-ethyl-2-propenyl, 1-hexenyl, 2-hexenyl, 3-hexenyl, 4-hexenyl, or 5-hexenyl group, or the like.

The lower alkynyl group may be a straight or branched alkynyl group with 2 to 6 (in particular 2 to 4) carbon atoms, such as, ethynyl, 1-propynyl, 2-propynyl, 1-butynyl, 2-butynyl, 3-butynyl, 1-methyl-2-propynyl, 1-pentyne, 2-pentyne, 3-pentyne, 4-pentyne, 1-methyl-2-butynyl, 1-methyl-3-butynyl, 2-methyl-3-butynyl, 3-methyl-1-butynyl, 1,1-dimethyl-2-propynyl, 1-hexynyl, 2-hexynyl, 3-hexynyl, 4-hexynyl, or 5-hexynyl group, or the like.

The lower alkoxy group may be a straight or branched alkoxy group with 1 to 6 (in particular 1 to 4) carbon atoms, such as, methoxy, ethoxy, n-propoxy, isopropoxy, n-butoxy, isobutoxy, t-butoxy, n-pentyloxy, or n-hexanoxy group, or the like.

The lower alkylthio group may be a straight or branched alkylthio group with 1 to 6 (in particular 1 to 4) carbon atoms, such as, methylthio, ethylthio, n-propylthio, isopropylthio, n-butylthio, isobutylthio, sec-butylthio, t-butylthio, n-pentylthio, or n-hexylthio group, or the like.

The halogen atom is, for example, fluorine, chlorine, bromine, or iodine atom.

Examples of the substituent of the substituted phenyl group are a lower alkyl group with 1 to 6 (in particular 1 to 4) carbon atoms, a lower alkoxy group with 1 to 6 (in particular 1 to 4) carbon atoms, a halogen atom, nitro, trifluoromethyl, carboxyl, or lower alkoxy carbonyl group, or the like.

The lower alkoxy carbonyl group may be an alkoxy carbonyl group with 2 to 6 (in particular, 2 to 4) carbon atoms, such as, methoxycarbonyl, ethoxycarbonyl, n-propoxycarbonyl, isopropoxycarbonyl, n-butoxycarbonyl, isobutoxycarbonyl, sec-butoxycarbonyl, t-butoxycarbonyl, or n-pentyloxycarbonyl group, or the like.

The protecting group for the tetrazolyl group may be trityl, p-nitrobenzyl, 1-ethoxyethyl or t-butoxycarbonyl group, or the like.

As a preferred compound of the general formula (I), there may be mentioned the compound wherein R<sup>1</sup> is a lower alkyl group of 1 to 6 carbon atoms, R<sup>2</sup> is a lower alkyl group of 1 to 4 carbon atoms, R<sup>3</sup> is a hydrogen atom, a lower alkyl group of 1 to 2 carbon atoms, or a lower alkanoyl group of 2 to 4 carbon atoms, X is O, m is 1, B is a cyano, tetrazolyl, or a protected tetrazolyl group, and n is 1.

Further, as a more preferred compound of the general formula (I), there may be mentioned the compound wherein R<sup>1</sup> is a methyl, ethyl, propyl, butyl, or pentyl group, R<sup>2</sup> is a methyl, ethyl, or propyl

group, R<sup>3</sup> is a hydrogen atom, methyl, or acetyl group, X is O, m is 1, B is a cyano, tetrazolyl, or trityl tetrazolyl group, and n is 1.

As the pharmaceutically acceptable salt of the compound (I) of the present invention, there may be mentioned, alkali metal salts, such as sodium or potassium salts, alkali earth metal salts, such as 5 magnesium or calcium salts, organic amine salts, such as methylamine, ethylamine, triethylamine, or pyridine salts, basic amino acid salts, such as lysine or arginine salts, or ammonium salts, or the like.

The compound (I) of the present invention may be one of geometrical isomers, optical isomers, or tautomers. One of the above isomers or the mixtures thereof is involved in the scope of the present invention.

10 The compound (I) of the present invention may be prepared, for example, by the following method. That is, a compound of the general formula (IV):

20 wherein E is a group of the general formula (IV-1):

30 wherein R<sup>1</sup>, R<sup>2</sup>, X and m have the same meanings as the above, and R<sup>4</sup> is a hydrogen atom, lower alkyl, or substituted lower alkyl group, or a group of the general formula (IV-2):

45 wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>4</sup>, X and m have the same meanings as the above, B' is a lower alkoxy carbonyl, cyano, or protected tetrazolyl group, and n has the same meaning as the above, may be prepared by reacting, in the presence of a base, a compound of the general formula (II):

wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>4</sup>, X, and m have the same meanings as the above, and a compound of the general formula (III):

5

10

wherein B' and n have the same meanings as the above, and Y is a halogen atom, alkylsulfonyloxy, or arylsulfonyloxy group.

As examples of the base which can be used in the above reaction, there may be mentioned alkali metal compounds, such as sodium hydroxide, potassium hydroxide, sodium hydride, sodium methoxide, sodium ethoxide, or potassium t-butoxide; alkali metal carbonates, such as sodium carbonate, potassium carbonate, sodium hydrogencarbonate, or potassium hydrogencarbonate; or organic amines, such as triethylamine, diisopropylethylamine, pyridine, or N,N-dimethylaminopyridine. Solvents which do not take part in the reaction may be used. Examples of the solvent are an organic solvent, such as N,N-dimethylformamide, dimethylsulfoxide, N-methylpyrrolidone, dioxane, tetrahydrofuran, acetone, or alcohol, or a mixture of one or more of the above solvents with water. The reaction temperature is in the range of -20 to 200°C, preferably 0 to 100°C, and the reaction is generally completed in 1 to 48 hours.

From the compound of the general formula (IV), the compound of the present invention of the general formula (Ia):

25

30

wherein Q is a group of the general formula (Ia-1):

35

40

45

wherein R<sup>1</sup>, R<sup>2</sup>, X, and m have the same meanings as the above, or a group of the general formula (Ia-2):

50

55

wherein R<sup>1</sup>, R<sup>2</sup>, X and m have the same meanings as the above, and B' and n have the same meanings as the above may be prepared in accordance with known methods, for example, the methods described in K. Soai et al., Bull. Chem. Soc. Jpn., 57, 1948 (1984), or G. Kototos, Syntehsis, 299 (1990).

As the reducing agent which may be used in the above reaction, there may be mentioned lithium aluminum hydride, or sodium borohydride, or a homologue thereof. The reducing agent may be optionally used in the presence of an appropriate Lewis acid, such as aluminum chloride, or cesium chloride. Solvents which do not take part in the reaction may be used. Examples of the solvent are tetrahydrofuran, diethyl ether, dioxane, methanol, ethanol, or dichloromethane. The reaction temperature is in the range of -20 to 100°C, preferably -10 to 60°C, and the reaction is generally completed in 30 minutes to 5 hours.

10 The compound of the general formula (la) of the present invention may be alkylated with an alkylating agent in the presence of a base to obtain a compound of the present invention of the general formula (lb):

*20* wherein Q' is a group of the general formula (Ib-1):

wherein R<sup>1</sup>, R<sup>2</sup>, X, and m have the same meanings as the above, and R<sup>5</sup> is a lower alkyl group, or a group of the general formula (Ib-2);

45 wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>5</sup>, X, and m have the same meanings as the above, and B' and n have the same meanings as the above.

The alkylation reaction may be generally performed, using approximately 1 to 3 moles of the base and approximately 1 to 3 moles of the alkylating agent with respect to 1 mole of the compound (I) of the present invention, in solvent, such as N,N-dimethylformamide, dimethylsulfoxide, acetonitrile, acetone, or ethyl methyl ketone. As the base which may be used in the alkylation reaction, there may be mentioned, for example, sodium hydroxide, potassium t-butoxide, potassium carbonate, or sodium carbonate. As the alkylating agent, there may be mentioned a substituted halide, such as chloride, bromide, or iodide, or substituted sulfonic acid esters, such as methyl p-toluenesulfonate. The reaction conditions vary with a combination of the base and the alkylating agent used, but the preferred alkylation reaction is performed generally at the ice-cold temperature to room temperature for approximately 1 to 48 hours.

The compound of the general formula (lb) of the present invention wherein Q' is the group of the general formula (lb-1) or (lb-2) wherein R<sup>5</sup> is a lower alkenyl, lower alkynyl, or acetyl group, may be

prepared by reacting, as in the above alkylation, the compound of the general formula (Ia) of the present invention with a corresponding alkenylating agent, alkynylating agent or acetylating agent.

The compound of the general formula (I) of the present invention wherein B is a tetrazolyl group may be prepared by removing a protecting group from the corresponding compound of the general formula (I) of the present invention wherein B is a protecting tetrazolyl group. Because of simplicity, the reaction is preferably performed in water-containing alcohol, such as methanol, or ethanol, or the like, containing approximately 0.5 to 2N hydrochloric or acetic acid, or in trifluoroacetic acid at ordinary temperature to 50°C for approximately 1 to 10 hours.

Further, the compound of the general formula (I) of the present invention wherein B is the tetrazolyl group may be also prepared by reacting a corresponding compound of the general formula (I) of the present invention wherein B is a nitrile group with an azide derivative. As the azide derivative used in the reaction, there may be mentioned sodium azide, potassium azide, trimethyltin azide, or trimethyltin azide. The reaction may be performed in the presence or absence of a solvent which does not take part in the reaction, such as benzene, toluene, or xylene, at 0 to 200°C for 30 minutes to 1 week to prepare the compound.

Further, the compound of the general formula (IV), (Ia) or (Ib) wherein B' is the tetrazolyl group may be also prepared from a compound having a corresponding nitrile group, in the similar manner as above.

The compound of the general formula (I) of the present invention wherein B is a carboxyl group may be also prepared by hydrolizing a corresponding compound of the general formula (I) of the present invention wherein B is a lower alkoxy carbonyl group in the presence of an acid or a base. The acid which may be used in the reaction is, for example, hydrochloric, or sulfuric acid, or the like, and the base which may be used is, for example, sodium hydroxide, or potassium hydroxide, or the like. The solvent is preferably a mixture of water and an alcohol, such as methanol, or ethanol, or the like. In general, the reaction is completed in the temperature range of ordinary temperature to reflux in 10 minutes to 10 hours.

The compound of the general formula (I) of the present invention wherein B is a lower alkoxy carbonyl group may be also prepared by esterifying a corresponding compound of the general formula (I) of the present invention wherein B is a carboxyl group in the presence of an acid. The acid which may be used in the reaction is, for example, hydrochloric, sulfuric, or arylsulfonic acid, or the like. The solvent which may be used in the reaction is an alcohol which is also a reactant, such as methanol, ethanol, propanol, or butanol, or the like. The reaction is completed in the temperature range of ordinary temperature to reflux in 1 to 24 hours.

A compound of the present invention of the general formula (Ic):

wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, B, m, and n have the same meanings as the above, may be prepared by reacting a compound of the general formula (V):

10 wherein R<sup>1</sup> and n have the same meanings as above, and R<sup>6</sup> is a nitrile or protected tetrazolyl group, with a compound of the general formula (VI):

25 wherein R<sup>2</sup>, R<sup>4</sup>, and m have the same meanings as above, and R<sup>7</sup> is a lower alkoxy carbonyl, hydroxymethyl, or lower alkoxy methyl group, to form a pyrimidine ring, and then, converting R<sup>6</sup> and R<sup>7</sup> in the similar manner as above.

Further, a compound of the present invention of the general formula (Id):

50 wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, B, m, and n have the same meanings as the above, is prepared by reacting a compound of the general formula (VII):

10 wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and m have the same meanings as above, and W is a halogen atom or nitro group, with a compound of the general formula (VIII):

20 wherein B and n have the same meanings as above, and Z is O, NH or S, under the similar reaction conditions to those for preparation of the compound of the general formula (IV), and then, optionally converting R<sup>3</sup> and/or B into other R<sup>3</sup> and/or B.

The starting compounds used for the aboved-mentioned processes are known per se or may be prepared by known methods. For example, the pyrimidine derivative of the general formula (II) may be prepared in accordance with the method described in Japanese Unexamined Patent Publication (Kokai) No. 3-133964. Further, the biphenyl derivatives of the general formulae (III) and (VIII) may be prepared in accordance with the method described in WO-89/06233 or Japanese Unexamined Patent Publication (Kokai) No. 1-117876.

30 The compound of the general formula (I) of the present invention prepared by the above-mentioned processes may be purified by ordinary methods for purification, such as recrystallization, reprecipitation, solvent extraction, silica gel column chromatography, or column chromatography with adsorptive resin, or the like.

The compound of the general formula (I) of the present invention has an angiotensin II antagonism and is low toxicity, and thus may be used as a pharmaceutical composition, particularly, an angiotensin II antagonist, for the treatment of various cardiovascular diseases. Examples of such cardiovascular diseases are hypertension, cardiac disease, cerebral infarction, arteriosclerosis, or the like. Further, the compound of the general formula (I) of the present invention is effective as an agent for the treatment of high intraocular pressure.

40 A pharmaceutical composition, in particular, an angiotensin II antagonist, containing the compound of the general formula (I) of the present invention or a pharmaceutically acceptable salt thereof as an effective ingredient may be administered orally or parenterally, for example, intramuscularly, intravenously, subcutaneously, percutaneously, or per rectum, or the like. The composition may be formulated with one or more pharmaceutically acceptable auxiliaries to form tablets, capsules, granules, dispersions, pills, fine 45 granules, injections, rectal agents, suppositories, or the like. As the pharmaceutically acceptable auxiliaries, there may be mentioned excipients, binding agents, disintegrating agents, lubricants, buffers, preservatives, solubilizing auxiliaries, antiseptics, agents for adjusting taste and/or smell, analgesics, stabilizers, coloring agents, or the like. The auxiliaries as above may be appropriately combined by ordinary methods.

As the excipients, lactose, sucrose, glucose, sorbitol, corn starch, crystalline cellulose, or the like may 50 be used. As the binding agent, a cellulose derivative, gum arabic, gelatine, polyvinyl alcohol, polyvinyl ether, or the like may be used. The disintegrating agent is, for example, calcium carboxymethylcellulose or the like. The lubricant is, for example, talc, magnesium stearate, polyethyleneglycol or the like. The preservative is, for example, methyl paraoxybenzoate, ethyl paraoxybenzoate, sorbic acid, phenol, cresol, chlorocresol or the like. The solubilizing auxiliary is, for example, polyoxyethylene hardened castor oil, 55 polysorbate 80, nicotinic acid amide, polyoxyethylene sorbitan monolaurate, macrogol, or the like. The agent for adjusting taste and/or smell is, for example, cocoa powder, peppermint oil, cinnamin powder, or the like. The stabilizer is, for example, sodium sulfite, sodium metasulfite, ether, or the like.

A pharmaceutical composition, in particular, an angiotensin II antagonist, of the present invention, contains the compound of the general formula (I) of the present invention or a pharmaceutically acceptable salt thereof as an effective ingredient in an amount effective for an angiotensin II antagonism, for example, 5 to 100 % by weight, preferably 25 to 100 % by weight. The dose effective for the angiotensin II antagonism varies with the age, body weight, sex, symptoms, method of administration, period of administration, desired therapeutic effect, or the like, but in the case of oral administration, the dose is normally 1 to 1000 mg, preferably 5 to 200 mg, per day for an adult, usually divided into one to three dosages.

**Examples**

10

The present invention now will be further illustrated by, but is by no means limited to, the following Reference Examples and Examples.

**Reference Example 1: Preparation of 5-(4-methoxycarbonylbenzyl)-6-methyl-2-propylpyrimidin-4(3H)-one**

15

Sodium methoxide (2.70 g) was dissolved in anhydrous methanol (60 ml). To the solution, n-propylamidine hydrochloride (6.13 g) was added. The whole was stirred at room temperature for 10 minutes. Then, ethyl 2-(4-methoxycarbonylbenzyl)-3-oxobutyrate (6.13 g) and absolute methanol (60 ml) were added, and the mixture was stirred at 50 °C overnight. After the solvent was evaporated under reduced pressure, water was added. The mixture was rendered to weak acidic with 1N hydrochloric acid, and extracted with ethyl acetate twice. The ethyl acetate extract layer was washed with water and saturated saline, and dried over anhydrous sodium sulfate. The solvent was evaporated under reduced pressure, and the resulting crystals were washed with n-hexane to obtain the above-titled compound (4.69 g).

**Reference Example 14: 6-ethyl-5-(3-methoxycarbonylbenzyl)-2-propylpyrimidin-4(3H)-one**

Yield: 71%,  
Melting point: 111-113 °C

**Reference Example 15: 2-butyl-6-ethyl-(3-methoxycarbonylbenzyl)pyrimidin-4(3H)-one**

Yield: 50%,  
Melting point: 93-95 °C

**Reference Example 16: 5-(3-methoxycarbonylbenzyl)-2-methyl-6-propylpyrimidin-4(3H)-one**

Yield: 62%,  
Melting point: 131-133 °C

Reference Example 17: 2-ethyl-5-(3-methoxycarbonylbenzyl)-6-propylpyrimidin-4(3H)-one

Yield: 56%,  
 Melting point: 122-124 °C

Reference Example 18: 5-(3-methoxycarbonylbenzyl)-2,6-dipropylpyrimidin-4(3H)-one

Yield: 53%,  
 Melting point: 109-110 °C

Reference Example 19: 2-butyl-5-(3-methoxycarbonylbenzyl)-6-propylpyrimidin-4(3H)-one

Yield: 61%,  
 Melting point: 115-117 °C

Reference Example 20: 6-ethyl-5-(4-methoxycarbonylbenzyl)-2-methylpyrimidin-4(3H)-one

Yield: 61%,  
 Melting point: 186-187 °C

Reference Example 21: Preparation of 5-(4-carboxybenzyl)-6-methyl-2-propyl-4-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine(a) Preparation of 5-(4-methoxycarbonylbenzyl)-6-methyl-2-propyl-4-[2'-(triphenylmethyltetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine

Sodium methoxide (0.65 g) was suspended in dry N,N-dimethylformamide (40 ml). The suspension was stirred at room temperature for 20 minutes. Then, 5-(4-methoxycarbonylbenzyl)-6-methyl-2-propylpyrimidin-4(3H)-one (3.60 g) and dry N,N-dimethylformamide (40 ml) were added and the mixture was stirred further for 1 hour. Then, 4'-bromomethyl-2-(triphenylmethyltetrazol-5-yl)biphenyl (7.35 g) was dissolved in dry N,N-dimethylformamide (40 ml) and the resulting solution was added dropwise to the reaction mixture. The whole was stirred at room temperature for 60 hours. After the reaction was completed, the reaction mixture was concentrated and water (40 ml) was added. Then, extraction was performed twice with ethyl acetate (150 ml). The ethyl acetate extract layer was washed with water and saturated saline, and then, dried over anhydrous sodium sulfate. The solvent was evaporated under reduced pressure and the resulting residue was purified, by silica gel column chromatography, eluting with n-hexane/ethyl acetate (3:1) to obtain the above-titled compound (2.92 g) as amorphous.

Yield: 31%

<sup>1</sup>H-NMR (CDCl<sub>3</sub>)δ: 0.90 (3H, t, J = 7.2Hz), 1.73-1.85 (2H, m), 2.38 (3H, s), 2.80 (2H, t, J = 7.8Hz), 3.86 (3H, s), 3.98 (2H, s), 5.34 (2H, s), 6.88-6.96 (8H, m), 7.12 (2H, d, J = 8.3Hz), 7.21-7.36 (12H, m), 7.43-7.51 (2H, m), 7.92-7.97 (3H, m)

MS (FAB) m/z: 777 (M + 1)

(b) Preparation of 5-(4-carboxybenzyl)-6-methyl-2-propyl-4-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine

The compound (1.10 g) prepared in Reference Example 21 (a) was dissolved in methanol (50 ml), and several drops of concentrated hydrochloric acid were added. The mixture was stirred at room temperature for 4 hours. Then, 2N NaOH (4.0 ml) was added and the whole was heated under reflux for 7 hours. After the reaction was completed, the reaction mixture was concentrated to a solid under reduced pressure. Water (30 ml) was added to dissolve the resulting residue. The insolubles were filtered out. The pH of the resulting solution was adjusted to 4 with 1N hydrochloric acid. The precipitated crystals were collected by filtration to obtain the above-titled compound (0.67 g) as white powder.

Yield: 91%,

Melting point: 167-169 °C

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 0.92 (3H, t, J = 7.5Hz), 1.69-1.82 (2H, m), 2.36(3H, s), 2.70 (2H, t, J = 7.4Hz), 4.01 (2H, s), 5.42 (2H, s), 7.06 (2H, d, J = 8.3Hz), 7.21 (2H, d, J = 8.1Hz), 7.24 (2H, d, J = 8.3Hz), 7.49-7.68 (4H, m), 7.82(2H, d, J = 8.3Hz)

(a) Preparation of 4-chloro-6-ethyl-5-(3-methoxycarbonylbenzyl)-2-methylpyrimidine

10    In phosphorus oxychloride (70 ml), 6-ethyl-5-(3-methoxycarbonylbenzyl)-2-methylpyrimidin-4(3H)-one (13.3 g) prepared in Reference Example 12 was dissolved. To the solution, triethylamine (6.4 ml) was added. Then, the whole was stirred at 45 °C for 30 minutes and concentrated under reduced pressure. Toluene was added to the residue and the mixture was concentrated. The procedure was repeated three times. To the residue, toluene was added, and the mixture was washed with water, saturated saline, and 5% sodium hydrogencarbonate solution successively. The mixture was dried over anhydrous magnesium sulfate. The solvent was evaporated under reduced pressure to obtain 4-chloro-6-ethyl-5-(3-methoxycarbonylbenzyl)-2-methylpyrimidine (12.9 g) as brown oil.

Yield: 92%

<sup>1</sup>H-NMR (CDCl<sub>3</sub>)δ: 1.37 (3H, t, J = 7.6Hz), 2.48 (3H, s), 2.93 (2H, q, J = 7.6Hz), 3.90 (3H, s), 4.21 (2H, s),

20    7.29 (2H, d, J = 7.6Hz), 7.37 (2H, t, J = 7.6Hz), 7.83 (1H, s), 7.91 (1H, d, J = 7.6Hz)

25    (b) Preparation of 5-(3-carboxybenzyl)-6-ethyl-2-methyl-4-[2'-(triphenylmethyltetrazol-5-yl)biphenyl-4-yl]-methoxypyrimidine

To a suspension of sodium hydride (1.68 g) in dry N,N-dimethylformamide (40 ml), 4'-hydroxymethyl-2-(triphenylmethyltetrazol-5-yl)biphenyl (19.8 g) was added portionwise under stirring at room temperature. The mixture was stirred for 30 minutes. In dry N,N-dimethylformamide (20 ml), the 4-chloro-6-ethyl-5-(3-methoxycarbonylbenzyl)-2-methylpyrimidine (12.9 g) prepared in Reference Example 58 (a) was dissolved and the resulting solution was added dropwise to the reaction mixture. The whole was stirred at room temperature overnight. After the reaction was completed, the reaction mixture was concentrated under reduced pressure and water (100 ml) was added. Then, extraction was performed with ethyl acetate (100 ml) twice. The ethyl acetate extract layer was dried over anhydrous magnesium sulfate and concentrated under reduced pressure. Then, methanol (80 ml) and concentrated hydrochloric acid (4 ml) were added to the residue and the mixture was stirred at room temperature for 1 hour. To the reaction mixture, 5N NaOH solution (40 ml) was added. The whole was stirred at 80 °C for 2 hours and concentrated under reduced pressure. Water (100 ml) was added and the whole was washed with diethyl ether (100 ml) twice. After the pH of the resulting solution was adjusted to 4 with 1N hydrochloric acid, the solution was extracted with ethyl acetate (100 ml) twice. The ethyl acetate extract layer was dried over anhydrous magnesium sulfate and concentrated under reduced pressure. The resulting residue was dissolved in dichloromethane (100 ml), and triphenylmethylchloride (11.2 g) and triethylamine (5.5 ml) were added to the solution. The whole was stirred at room temperature overnight. After the reaction was completed, the reaction mixture was washed with water and dried over anhydrous magnesium sulfate. The solvent was evaporated under reduced pressure and the resulting residue was purified, by silica gel column chromatography, eluting with chloroform/methanol (50:1) to obtain the above-titled compound (11.4 g).

Yield: 38%,

Melting point: 101-103 °C

<sup>1</sup>H-NMR (CDCl<sub>3</sub>)δ: 1.17 (3H, t, J = 7.6Hz), 2.62 (3H, s), 2.76 (2H, q, J = 7.6Hz), 3.99 (2H, s), 5.33 (2H, s),

Example 1: Preparation of 5-(4-hydroxymethylbenzyl)-6-methyl-2-propyl-4-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine

5 (a) Preparation of 5-(4-hydroxymethylbenzyl)-6-methyl-2-propyl-4-[2'-(triphenylmethyltetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine

To a solution of the compound (0.84 g) prepared in Reference Example 21 in dichloromethane (20 ml), triphenylmethyl chloride (0.50 g) and triethylamine (0.26 ml) were added. The mixture was stirred at room temperature overnight. After the reaction was completed, the reaction mixture was washed with water and dried over anhydrous sodium sulfate. The solvent was evaporated and the resulting residue was purified, by silica gel column chromatography, eluting with dichloromethane/methanol (30:1) to obtain N-trityl compound (0.90 g) as amorphous (yield = 73%). The resulting N-trityl compound was dissolved in dry tetrahydrofuran (THF) (8 ml) and the solution was stirred at -10 °C for 10 minutes. After N-methylmorpholine (0.14 ml) and ethyl chloroformate (0.12 ml) were added to the solution at the same temperature, the whole was further stirred for 10 minutes. After stirring, sodium borohydride (0.14 g) was added quickly at the same temperature, and the reaction mixture was warmed to 0 °C. Then, dry methanol (16 ml) was added portionwise to the reaction mixture at the same temperature. After stirring for 15 minutes, the reaction mixture was concentrated and water (20 ml) was added. The whole was extracted with ethyl acetate (150 ml) twice. The ethyl acetate extract layer was washed with water and saturated saline and dried over anhydrous sodium sulfate. The solvent was evaporated under reduced pressure and the resulting residue was purified, by silica gel column chromatography, eluting with n-hexane/ethyl acetate (2:1) to obtain the above-titled compound (0.78 g) as amorphous.

Example 2: Preparation of 5-(4-methoxymethylbenzyl)-6-methyl-2-propyl-4-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine

50 (a) Preparation of 5-(4-methoxymethylbenzyl)-6-methyl-2-propyl-4-[2'-(triphenylmethyltetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine

The compound (0.39 g) prepared in Example 1 (a) was dissolved in dry N,N-dimethylformamide (10 ml) under an argon gas atmosphere. The mixture was stirred at room temperature for 10 minutes. Then, sodium hydride (0.02 g) was added to the reaction mixture. After stirring for 10 minutes, methyl iodide (0.10 ml) was added to the mixture and the whole was stirred at room temperature for 30 hours. After the reaction was completed, water (40 ml) was added to the reaction mixture. The whole was extracted with ethyl acetate (30 ml) twice. The ethyl acetate extract layer was washed with water and saturated saline and dried

over anhydrous sodium sulfate. The solvent was evaporated under reduced pressure and the resulting residue was purified, by silica gel column chromatography, eluting with n-hexane/ethyl acetate (3:1) to obtain the above-titled compound (0.23 g) as amorphous.

Yield: 58%,  
 5 Melting point: 52-54 °C  
<sup>1</sup>H-NMR (CDCl<sub>3</sub>)δ: 1.00 (3H, t, J = 7.4Hz), 1.77-1.93 (2H, m), 2.40 (3H, s), 2.78 (2H, t, J = 7.7Hz), 3.34 (3H, s), 3.93 (2H, s), 4.38 (2H, s), 5.34 (2H, s), 6.87-6.97 (6H, m), 7.07-7.10 (6H, m), 7.18-7.53 (14H, m), 7.91-7.95 (1H, m)

 MS (FAB) m/z: 535 (M + 1)

Examples 23 and 24

The compound prepared in Reference Example 38 was treated in accordance with the method described in above-mentioned Examples 1 and 2 to obtain the compounds described in the following Examples 23 and 24.

**EP 0 685 467 A1**

**Example 23: Preparation of 2-butyl-5-(3-hydroxymethylbenzyl)-6-methyl-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methylpyrimidin-4-one**

Yield: 66%,

Melting point: 91-93 °C

<sup>5</sup> <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 0.81 (3H, t, J = 7.2Hz), 1.23-1.31 (2H, m), 1.53-1.58 (2H, m), 2.22 (3H, s), 2.60 (2H, t, J = 7.6Hz), 3.84 (2H, s), 4.44 (2H, s), 5.30 (2H, s), 7.08 (4H, s), 7.05-7.23 (4H, m), 7.50-7.66 (4H, m)

IR (KBr) cm<sup>-1</sup>: 3400, 2960, 1650, 1535

MS (FAB) m/z: 521 (M + 1)

**Example 24: Preparation of 2-butyl-5-(3-methoxymethylbenzyl)-6-methyl-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methylpyrimidin-4-one**

Yield: 14%,

Melting point: 80-82 °C

<sup>15</sup> <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 0.81 (3H, t, J = 7.2Hz), 1.23-1.31 (2H, m), 1.50-1.58 (2H, m), 2.21 (3H, s), 2.60 (2H, t, J = 7.6Hz), 3.26 (3H, s), 3.85 (2H, s), 4.35 (2H, s), 5.30 (2H, s), 7.07 (4H, s), 7.08-7.26 (4H, m), 7.49-7.69 (4H, m)

IR (KBr) cm<sup>-1</sup>: 3440, 2925, 1650, 1540

MS (FAB) m/z: 535 (M + 1)

**Example 25: Preparation of 5-(3-hydroxymethylbenzyl)-6-methyl-2-pentyl-4-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methoxypyrimidine**

<sup>25</sup> The compound prepared in Reference Example 39 was treated in accordance with the method described in above-mentioned Example 1 to obtain the above-titled compound.

Yield: 16%,

Melting point: 74-76 °C

<sup>16</sup> <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 0.86 (3H, t, J = 7.1Hz), 1.28-1.33 (4H, m), 1.72-1.77 (2H, m), 2.42 (3H, s), 2.77 (2H, t, J = 7.6Hz), 3.95 (2H, s), 4.42 (2H, s), 5.47 (2H, s), 6.96-7.29 (8H, m), 7.50-7.67 (4H, m)

IR (KBr) cm<sup>-1</sup>: 2950, 2930, 1605, 1570, 1345

MS (FAB) m/z: 535 (M + 1)

**Example 26: Preparation of 5-(3-hydroxymethylbenzyl)-6-methyl-2-pentyl-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methylpyrimidin-4-one**

The compound prepared in Reference Example 40 was treated in accordance with the method described in above-mentioned Example 1 to obtain the above-titled compound.

Yield: 37%,

<sup>40</sup> Melting point: 100-102 °C

<sup>17</sup> <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 0.81 (3H, t, J = 7.1Hz), 1.15-1.32 (4H, m), 1.53-1.65 (2H, m), 2.28 (3H, s), 2.71 (2H, t, J = 7.7Hz), 3.85 (2H, s), 4.45 (2H, s), 5.32 (2H, s), 7.05-7.23 (8H, m), 7.49-7.69 (4H, m)

IR (KBr) cm<sup>-1</sup>: 2960, 2930, 1700, 1655, 1540

MS (FAB) m/z: 535 (M + 1)

**Examples 27 and 28**

<sup>50</sup> The compound prepared in Reference Example 41 was treated in accordance with the method described in above-mentioned Examples 1 and 2 to obtain the compounds described in the following Examples 27 and 28.

**Example 27: Preparation of 6-ethyl-5-(3-hydroxymethylbenzyl)-2-methyl-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methylpyrimidin-4-one**

<sup>55</sup> Yield: 47%,

Melting point: 103-105 °C

<sup>18</sup> <sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 1.06 (3H, t, J = 7.6Hz), 2.39 (3H, s), 2.51-2.55 (2H, m), 3.86 (2H, s), 4.44 (2H, s), 5.28 (2H, s), 7.03-7.22 (8H, m), 7.51-7.69 (4H, m)

IR (KBr)  $\text{cm}^{-1}$ : 3420, 1650, 1605, 1540  
 MS (FAB) m/z: 493 (M + 1)

Example 28: Preparation of 6-ethyl-5-(3-methoxymethylbenzyl)-2-methyl-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methylpyrimidin-4-one

Yield: 45%,  
 Melting point: 88-90 °C  
<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 1.04 (3H, t, J = 7.5Hz), 2.38 (3H, s), 2.51-2.54 (2H, m), 3.25 (3H, s), 3.87 (2H, s),  
 4.34 (2H, s), 5.28 (2H, s), 7.09-7.25 (8H, m), 7.51-7.69 (4H, m)  
 IR (KBr)  $\text{cm}^{-1}$ : 1655, 1605, 1540, 1450  
 MS (FAB) m/z: 507 (M + 1)

Example 29: Preparation of 2,6-diethyl-5-(3-hydroxymethylbenzyl)-4-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]-methoxypyrimidine

The compound prepared in Reference Example 42 was treated in accordance with the method described in above-mentioned Example 1 to obtain the above-titled compound.

Yield: 18%,  
 Melting point: 83-85 °C  
<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 1.11 (3H, t, J = 7.6Hz), 1.25 (3H, t, J = 7.6Hz), 2.68 (2H, q, J = 7.5Hz), 2.75 (2H, q, J = 7.6Hz), 3.95 (2H, s), 4.41 (2H, s), 5.43 (2H, s), 6.93-7.28 (8H, m), 7.51-7.70 (4H, m)  
 IR (KBr)  $\text{cm}^{-1}$ : 3410, 1570, 1420, 1345  
 MS (FAB) m/z: 507 (M + 1)

Examples 30 and 31

The compound prepared in Reference Example 43 was treated in accordance with the method described in above-mentioned Examples 1 and 2 to obtain the compounds described in the following Examples 30 and 31.

Example 30: Preparation of 2,6-diethyl-5-(3-hydroxymethylbenzyl)-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]-methoxypyrimidin-4-one

Yield: 33%,  
 Melting point: 96-98 °C  
<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 1.06-1.14 (6H, m), 2.53 (2H, q, J = 7.4Hz), 2.65 (2H, q, J = 7.3Hz), 3.87 (2H, s),  
 4.44 (2H, s), 5.30 (2H, s), 7.08 (4H, s), 7.03-7.22 (4H, m), 7.50-7.69 (4H, m)  
 IR (KBr)  $\text{cm}^{-1}$ : 3425, 2985, 1650, 1540  
 MS (FAB) m/z: 507 (M + 1)

Example 31: Preparation of 2,6-diethyl-5-(3-methoxymethylbenzyl)-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]-methylpyrimidin-4-one

Yield: 50%,  
 Melting point: 79-81 °C  
<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 1.07 (3H, t, J = 7.4Hz), 1.12 (3H, t, J = 7.3Hz), 2.53 (2H, q, J = 7.5Hz), 2.65 (2H, q, J = 7.3Hz), 3.25 (3H, s), 3.88 (2H, s), 4.34 (2H, s), 5.30 (2H, s), 7.08 (4H, s), 7.09-7.25 (4H, m), 7.50-7.69 (4H, m)  
 IR (KBr)  $\text{cm}^{-1}$ : 3440, 2980, 1650, 1540  
 MS (FAB) m/z: 521 (M + 1)

Example 32: Preparation of 6-ethyl-5-(3-hydroxymethylbenzyl)-2-propyl-4-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]-methoxypyrimidine

The compound prepared in Reference Example 44 was treated in accordance with the method described in above-mentioned Example 1 to obtain the above-titled compound.

Yield: 63%,

**EP 0 685 467 A1**

Melting point: 70-72 °C

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>)δ: 0.92 (3H, t, J = 7.4Hz), 1.07-1.21 (3H, m), 1.69-1.83 (2H, m), 2.63-2.77 (4H, m), 3.95 (2H, s), 4.41 (2H, s), 5.41 (2H, s), 6.92-7.27 (8H, m), 7.50-7.69 (4H, m)  
IR (KBr) cm<sup>-1</sup>: 3420, 1570, 1420, 1345

35 (b) Preparation of 5-(3-acetoxymethylbenzyl)-6-methyl-2-propyl-3-[2'-(triphenylmethyltetrazol-5-yl)biphenyl-4-yl]methoxypyrimidin-4-one

The compound (7.6 g) prepared in Example 48 (a) was dissolved in dichloromethane (40 ml). Triethylamine (1.8 ml) was added to the solution. After acetyl chloride (0.8 ml) was added dropwise under stirring while cooling on ice, the mixture was stirred at room temperature overnight. After the reaction was completed, the reaction mixture was washed with water and saturated saline and dried over anhydrous magnesium sulfate. The solvent was evaporated under reduced pressure and the resulting crystals were recrystallized from ethanol/water to obtain the above-captioned compound (5.6 g).

Example 49: Preparation of 3-(2'-cyanobiphenyl-4-yl)methyl-5-(3-hydroxymethylbenzyl)-6-methyl-2-propylpyrimidin-4-one

5 (a) Preparation of 3-(2'-cyanobiphenyl-4-yl)methyl-5-(3-methoxycarbonylbenzyl)-6-methyl-2-propylpyrimidin-4-one

To a suspension of cesium carbonate (97.8 g) in dioxane (370 ml), the compound (45.0 g) prepared in Reference Example 9 was added. The mixture was stirred at room temperature for 20 minutes. In dioxane (740 ml), 4'-bromomethyl-2-cyanobiphenyl (40.6 g) was dissolved and the resulting solution was added dropwise to the mixture. The whole was stirred at room temperature overnight. Further, the reaction mixture was heated under reflux for 3 hours. The solvent was evaporated under reduced pressure. Water was added to dissolve the resulting residue. The precipitated crystals were collected by filtration and recrystallized from ethyl acetate to obtain the above-captioned compound (56.8 g).

Yield: 85%,

15 Melting point: 143-144 °C

<sup>1</sup>H-NMR (CDCl<sub>3</sub>)δ: 0.98 (3H, t, J = 7.3Hz), 1.70-1.78 (2H, m), 2.34 (3H, s), 2.65 (2H, t, J = 7.8Hz), 3.89 (2H, s), 3.99 (2H, s), 5.37 (2H, s), 7.25-7.37 (3H, m), 7.41-7.55 (5H, m), 7.61-7.67 (1H, m), 7.76 (1H, d, J = 7.6Hz), 7.86 (1H, d, J = 7.6Hz), 7.93 (1H, s)

(c) Preparation of 3-(2'-cyanobiphenyl-4-yl)methyl-5-(3-hydroxymethylbenzyl)-6-methyl-2-propylpyrimidin-4-one

40 The compound (30 g) prepared in Example 49 (b) was dissolved in dry THF (300 ml). Under stirring at -10 °C, N-methylmorpholine (6.92 ml) and ethyl chloroformate (6.58 ml) were added to the solution. After the whole was further stirred for 10 minutes, sodium borohydride (7.18 g) was added. Under stirring while cooling on ice, methanol (600 ml) was added dropwise slowly. After the whole was stirred at room temperature for 30 minutes, the solvent was evaporated under reduced pressure. Water (500 ml) was added 45 to dissolve the resulting residue, and the solution was extracted with ethyl acetate (500 ml) twice. The ethyl acetate extract layer was washed with saturated saline and dried over anhydrous sodium sulfate. The solvent was evaporated under reduced pressure and the resulting crystals were recrystallized from ethanol/water to obtain the above-titled compound (25.4 g).

Yield: 87%,

20 The components of the above composition were dissolved in distilled water for injections so that a total volume became 1000 ml. The solution was poured into ampules to prepare an injection of 1 ml per ampule.

Pharmacological Example 1: Angiotension II receptor binding

25 The specific affinity of the compound of the present invention to an angiotensin II receptor was evaluated by substitution of radioactive ligands bound to an angiotensin II receptor prepared from rat liver.

## (1) Preparation of angiotensin II receptor

30 The liver was obtained from 5-week-old Wistar male rat (Japan Charles River Inc.) and homogenized in the homogenizing buffer to prepare 10% concentration preparation. The homogenate was centrifuged at 3000 x g for 15 minutes and the supernatant was collected. The collected supernatant was centrifuged at 50000 x g for 30 minutes to obtain pellets. The homogenizing buffer (20 ml) was added to resuspend the resulting pellets and the angiotensin II receptor was prepared. The receptor was frozen at -80°C until use.

## Homogenizing Buffer

10 mM HEPES (pH 7.4) (\*)

0.2% bovine serum albumin

10 μM pepstatin A

40 10 μM bestatin

10 μM leupeptin

10 μM captorpryl

100 μM phenylmethanesulfonyl fluoride

## 45 (2) Receptor binding assay

The above receptor was thawed, and diluted to 250 μg/ml protein with the assay buffer. Then, the receptor, 0.5nM [<sup>3</sup>H]-angiotensin II and the compound which was diluted to the various concentrations were incubated at 25°C for 1 hour. The reaction mixture was filtered under suction through a glass fiber filter (Whatman GF/B filter) to commence the reaction and at the same time separate the [<sup>3</sup>H]-angiotensin II bound to the receptor and the free [<sup>3</sup>H]-angiotensin II. After the filter was rinsed with a washing buffer (10 mM HEPES, pH 7.4), the radioactivity absorbed to the filter was measured by a liquid scintillation counter (Beckman). The non-specific bindings were measured after adding 10<sup>-5</sup> M non-labeled angiotensin II to the reaction.

## 55 Assay Buffer

10 mM HEPES (pH 7.4)

(\*) HEPES = N-(2-hydroxyethyl)piperazine-N'-2-ethansulfonate

0.2% bovine serum albumin  
10 mM MgCl<sub>2</sub>

(3) Calculation of IC<sub>50</sub> value

5

The IC<sub>50</sub> value was calculated by the formula:

$$Y = T - S \times D / (D + K)$$

10 (R.J. Bruns, et. al., Molecular Pharmacology, 29: 331-346, 1986). In the formula, Y is the bound radioactivity in the presence of the compound to be tested, T is the bound radioactivity in the absence of the compound to be tested, S is the specifically bound radioactivity in the absence of the compound to be tested, D is the concentration of the compound to be tested, and K is the IC<sub>50</sub> value of the compound to be tested. The test results are shown in Table 1.

15

Table 1

	Compound to be tested	IC <sub>50</sub> (M)
20	Compound of Example 3	4.3 x 10 <sup>-8</sup>
	Compound of Example 4	1.1 x 10 <sup>-8</sup>
	Compound of Example 6	2.9 x 10 <sup>-8</sup>
	Compound of Example 7	1.6 x 10 <sup>-8</sup>
	Compound of Example 9	1.6 x 10 <sup>-8</sup>
25	Compound of Example 13	1.4 x 10 <sup>-8</sup>
	Compound of Example 15	1.2 x 10 <sup>-8</sup>
	Compound of Example 16	8.1 x 10 <sup>-9</sup>
	Compound of Example 17	9.6 x 10 <sup>-9</sup>
	Compound of Example 18	1.2 x 10 <sup>-8</sup>
30	Compound of Example 19	3.8 x 10 <sup>-9</sup>
	Compound of Example 20	6.6 x 10 <sup>-9</sup>
	Compound of Example 22	3.0 x 10 <sup>-8</sup>
	Compound of Example 23	8.3 x 10 <sup>-9</sup>
	Compound of Example 24	1.8 x 10 <sup>-8</sup>
35	Compound of Example 27	1.8 x 10 <sup>-8</sup>
	Compound of Example 29	2.7 x 10 <sup>-8</sup>
	Compound of Example 30	9.6 x 10 <sup>-9</sup>
	Compound of Example 31	1.2 x 10 <sup>-8</sup>
	Compound of Example 34	2.5 x 10 <sup>-8</sup>
40	Compound of Example 38	2.2 x 10 <sup>-8</sup>
	Compound of Example 40	2.4 x 10 <sup>-8</sup>
	Compound of Example 42	2.3 x 10 <sup>-8</sup>
	Compound of Example 47	9.9 x 10 <sup>-9</sup>

45

Pharmacological Example 2: Inhibitory activity of vasoconstriction

50 The applicability of the compound of the present invention was confirmed by the function to inhibit constriction of rat aorta induced by angiotensin II.

55

## (1) Measurement of vasoconstriction using Magnus apparatus

Stetharteries of Wistar male rats having body weights of 150 to 250 g (Japan Charles River Inc.) were excised. After the attached connective tissue was removed, the cavities of the veins were rubbed by yarn to remove the endothelial cells and prepare ring samples. The samples were suspended in a 5ml organ bath which was filled with Krebs-Henseleit solution (unit mM; NaCl = 118, KCl = 4.7, CaCl<sub>2</sub> = 2.55, MgSO<sub>4</sub> = 1.18, KH<sub>2</sub>PO<sub>4</sub> = 1.18, NaHCO<sub>3</sub> = 24.88, glucose = 11.1) and held at 37°C and bubbled with 95% O<sub>2</sub>-5% CO<sub>2</sub>. After an initial tension of 1.5 g was applied and preincubation was carried out for 60 minutes, the

compounds to be tested ( $3 \times 10^{-8}$  or  $1 \times 10^{-8}$ ) were administered. After 15 minutes,  $3 \times 10^{-8}$  angiotensin II was accumulatively added and the reaction of constriction was measured. The rate of inhibition was evaluated by comparing the reaction of constriction, which had been previously measured, in the case of administration of  $3 \times 10^{-8}$  angiotensin II in the absence of the compounds to be tested.

5 The constriction of the samples was ionotropically measured using an isometric transducer (UL-10GR: Minebea) and amplifier (6M92: NEC SANEI) and recorded by a recticorder (RECTI-HORIZ-8K: NEC SANEI). The test results are shown in Table 2.

Table 2

10

15

20

	Compound to be tested	Rate of inhibition (%)	
		$1 \times 10^{-8}$ M	$3 \times 10^{-8}$ M
	Compound of Example 3	78	98
	Compound of Example 4	36	94
	Compound of Example 19	100	100
	Compound of Example 20	100	100
	Compound of Example 23	95	100
	Comparative compound A a)	8	37
	Comparative compound B b)	5	32

a):

2-butyl-6-methyl-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methylpyrimidin-4-one:  
compound described in European Publication No. 0407342

b):

5-benzyl-2-butyl-6-methyl-3-[2'-(1H-tetrazol-5-yl)biphenyl-4-yl]methylpyrimi-  
din-4-one

30

As clear from Table 2, the compound of the general formula (I) of the present invention is superior in activity of inhibiting vasoconstriction, in comparison with the compound described in European Publication No. 0407342 and the pyrimidine derivative having a benzyl group at 5-position used as the comparative compounds.

35

#### Toxicity Example

The compounds of Examples 3, 19, 20, or 23 were intraperitoneally administered to 4- to 5-week-old ICR male mice in an amount of 500 mg/kg. No deaths were observed in any of the groups.

The compounds of Examples 15, 19, or 47 were orally administered to 6-week-old ICR male and female mice in an amount of 1000 mg/kg. No deaths were observed in any of the groups.

#### INDUSTRIAL APPLICABILITY

45

As explained above, the compound of the general formula (I) of the present invention exhibits a superior angiotensin II antagonism and is very safe, and thus is useful as an effective ingredient of a pharmaceutical composition, in particular, a superior agent for the cardiovascular system. Accordingly, the compound of the present invention is useful as an agent for the treatment of various cardiovascular diseases, for example, hypertension, cardiac disease, cerebral infarction, and arteriosclerosis.

50

As above, the present invention was explained with reference to particular embodiments, but modifications and improvements obvious to those skilled in the art are included in the scope of the present invention.

The structural formulas of the compounds described in Example 1 to Example 50 are shown hereinafter. In the following structural formulas, Me is a methyl group, Et is an ethyl group, Pr is a propyl group, Bu is a butyl group, Pen is a pentyl group, Ac is an acetyl group, and Ph is a phenyl group.

**Claims**

1. A pyrimidine derivative of the general formula (I):

35

wherein A is a group of the general formula (I-1):

45

55 wherein R<sup>1</sup> and R<sup>2</sup>, which may be same or different, are a hydrogen or halogen atom, lower alkyl, lower alkenyl, lower alkynyl, lower alkoxy, lower alkylthio, acetyl, phenyl, or substituted phenyl group, R<sup>3</sup> is a hydrogen atom, lower alkyl, lower alkenyl, lower alkynyl, or acetyl group, X is O, NH, or S(O)<sub>p</sub>, p is an integer of 0 to 2, and m is an integer of 1 to 2, or a group of the general formula (I-2):

10 wherein R¹, R², R³, X, p, and m have the same meanings as above, B is a carboxyl, lower alkoxycarbonyl, cyano, tetrazolyl, or protected tetrazolyl group, and n is an integer of 1 to 2, or a salt thereof.

- 15 2. A pyrimidine derivative according to claim 1 of the general formula (I) wherein R¹ is a lower alkyl group of 1 to 6 carbon atoms, R² is a lower alkyl group of 1 to 4 carbon atoms, R³ is a hydrogen atom, a lower alkyl group of 1 to 2 carbon atoms, or a lower alkanoyl group of 2 to 4 carbon atoms, X is O, m is 1, B is a cyano, tetrazolyl, or a protected tetrazolyl group, and n is 1, or a salt thereof.
- 20 3. A pyrimidine derivative according to claim 1, wherein R¹ is a methyl, ethyl, propyl, butyl, or pentyl group, R² is a methyl, ethyl, or propyl group, R³ is a hydrogen atom, methyl, or acetyl group, X is O, m is 1, B is a cyano, tetrazolyl, or trityl tetrazolyl group, and n is 1, or a salt thereof.
- 25 4. A process for manufacturing a pyrimidine derivative of the general formula (I):

wherein A is a group of the general formula (I-1):

40 45 wherein R¹ and R², which may be same or different, are a hydrogen or halogen atom, lower alkyl, lower alkenyl, lower alkynyl, lower alkoxy, lower alkylthio, acetyl, phenyl, or substituted phenyl group, R³ is a hydrogen atom, lower alkyl, lower alkenyl, lower alkynyl, or acetyl group, X is O, NH, or S(O)p, p is an integer of 0 to 2, and m is an integer of 1 to 2, or a group of the general formula (I-2):

EP 0 685 467 A1

wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, X, and m have the same meanings as above, B is a carboxyl, lower alkoxy carbonyl, cyano, tetrazolyl, or protected tetrazolyl group, and n is an integer of 1 to 2, or a salt thereof, characterized by reacting, in the presence of a base, a compound of the general formula (II):

5

10

15

wherein R<sup>1</sup>, R<sup>2</sup>, X, and m have the same meanings as the above, and R<sup>4</sup> is a hydrogen atom, lower alkyl, or substituted lower alkyl group, and a compound of the general formula (III):

20

35

30

wherein B' is a lower alkoxy carbonyl, cyano, or protected tetrazolyl group, Y is a halogen atom, alkylsulfonyloxy, or arylsulfonyloxy group, and n has the same meaning as the above, to form a compound of the general formula (IV):

wherein E is a group of the general formula (IV-1):

40

45

55

wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>4</sup>, X, and m have the same meanings as the above, or a group of the general formula (IV-2):

wherein R¹, R², R⁴, X, and m have the same meanings as the above, and B' and n have the same meanings as the above, reducing the resulting compound of the general formula (IV) to convert -COOR⁴ in the above general formulae (IV-1) and (IV-2) into -CH₂OH, and optionally treating with an alkylating, alkenylating, alkynylating or acylating agent.

- 15
5. A process for manufacturing a pyrimidine derivative of the general formula (Id):

wherein R¹ and R², which may be same or different, are a hydrogen or halogen atom, lower alkyl, lower alkenyl, lower alkynyl, lower alkoxy, lower alkylthio, acetyl, phenyl, or substituted phenyl group, R³ is a hydrogen atom, lower alkyl, lower alkenyl, lower alkynyl, or acetyl group, B is a carboxyl, lower alkoxy carbonyl, cyano, tetrazolyl, or protected tetrazolyl group, m is an integer of 1 to 2, and n is an integer of 1 to 2, or a salt thereof, characterized by reacting a compound of the general formula (VII):

55

wherein R¹, R², R³, and m have the same meanings as above, and W is a halogen atom or nitro group, and a compound of the general formula (VIII):

wherein B and n have the same meanings as above, and Z is O, NH or S, and optionally converting R<sup>3</sup> and/or B into other R<sup>3</sup> and/or B.

- 10
6. A pharmaceutical composition characterized by containing a pyrimidine derivative of the general formula (I):

20 wherein A is a group of the general formula (I-1):

wherein R<sup>1</sup> and R<sup>2</sup>, which may be same or different, are a hydrogen or halogen atom, lower alkyl, lower alkenyl, lower alkynyl, lower alkoxy, lower alkylthio, acetyl, phenyl, or substituted phenyl group, R<sup>3</sup> is a hydrogen atom, lower alkyl, lower alkenyl, lower alkynyl, or acetyl group, X is O, NH, or S(O)<sub>p</sub>, p is an integer of 0 to 2, and m is an integer of 1 to 2, or a group of the general formula (I-2):

50 wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, X, p, and m have the same meanings as above, B is a carboxyl, lower alkoxy carbonyl, cyano, tetrazolyl, or protected tetrazolyl group, and n is an integer of 1 to 2, or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable carrier.

7. A pharmaceutical composition according to claim 6, which is an angiotensin II antagonist.
8. A pharmaceutical composition according to claim 6, which is an agent for treating cardiovascular diseases.
9. Use of the compound according to claim 1 for preparing a pharmaceutical composition.

**EP 0 685 467 A1**

10. A method for treatment of angiotensin II inhibition comprising administering to a mammal in need thereof the compound according to claim 1 in an amount effective for angiotensin II inhibition.

## INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP94/02114

## A. CLASSIFICATION OF SUBJECT MATTER

Int. Cl<sup>6</sup> C07D239/34, C07D239/36, C07D239/38, C07D239/40,  
C07D239/42, C07D403/12, A61K31/505

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

Int. Cl<sup>6</sup> C07D239/34, C07D239/36, C07D239/38, C07D239/40,  
C07D239/42, C07D403/12, A61K31/505

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

CAS ONLINE

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
A	US, A, 5087634 (G. D. Searle & Co.), February 11, 1992 (11. 02. 92), ABSTRACT & WO, A, 9207834	1-10
A	EP, A, 445811 (TAKEDA CHEMICAL INDUSTRIES, LTD.), September 11, 1991 (11. 09. 91), whole document & JP, A, 5-155862	1-10

 Further documents are listed in the continuation of Box C. See patent family annex.

## \* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubt on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
- "&" document member of the same patent family

Date of the actual completion of the international search

February 8, 1995 (08. 02. 95)

Date of mailing of the international search report

February 28, 1995 (28. 02. 95)
